

CARE AND MAINTENANCE

Q: I spend a lot of time outdoors and often sunscreen dirties my lenses. How should I best clean my lenses?

A: If you have heavy soil or grime caused by salt water, dust, sunscreen or other substances, a drop of mild dish soap with warm water should safely remove dirt and grime without scratching your lenses. If you spend a lot of time in or on the ocean, get in the habit of rinsing your glasses off periodically under the tap. It will extend the life of your lenses.

Never use tissues, paper towels or paper-based products to clean your lenses. Instead, use the Kaenon Polarized micro-fiber cleaning bags and cloths for every day cleaning of your lenses. Be sure to avoid any household cleaners that may contain ammonia or bleach.

Q: Can I clean my Kaenon SR-91 lenses with a cotton t-shirt?

A: We don't recommend cleaning your lenses with a t-shirt as your clothing absorbs salt, sweat and dirt which can then transfer to your lenses. You may end up scratching your lenses as a result.
