

## We're waterproof

### Product Care Instructions

SealSkinz products can be machine washed up to 40°C and some can be tumble dried. It is advised that you do not iron or dry out on a radiator or other direct heat source.

These specific instructions relate to our socks, Ultra Grip and Ultra Tough gloves. For all other products please refer to their individual wash care labels.

### How do I wash them?

The majority of the SealSkinz range are designed to be machine washed, but at no higher temperature than 40°C. However some products need a lower temperature so please refer to the care instructions on the individual products.

### How long do they take to dry?

If you turn them inside out they should dry overnight in a warm room or airing cupboard, just remember not to put them directly on to radiators! The heavier weight socks, such as the Mid Thermal or Trekking sock, may take longer due to the thickness of the product.
