

Garment Care

The SLAM range uses a wide range of fabric technologies to ensure a high level of garment performance and comfort. To maintain the performance of the garment, please refer to the washing instructions printed on the label inside your garment. Use pure liquid soap only; do not use any fabric softeners or biological washing powders.

In between washing your sailing clothing, it is important to remember that salt is a desiccant and will attract moisture. Consequently, all foul weather gear should be rinsed periodically using fresh water (if available) to prevent salt from accumulating. This will reduce the cold, clammy feeling when first putting the garment on and will significantly increase the level of comfort for the wearer. When you have finished using the garments and before stowing them away, ensure they are thoroughly dried. Do not use direct heat or leave exposed to strong sunlight when drying.
