

Frequently Asked Questions

Q. How should I care for my jacket between uses?

A. Proper care and storage your jacket will help your jacket to maintain its structural integrity and buoyancy. It's easy, here are a few tips:

If you used your PFD in salt water or water that seems especially dirty, rinse your jacket thoroughly with fresh water. (If you just used it in relatively clean fresh water, you can skip this step.)

- Thoroughly dry your jacket after each use.
- Store your PFD in a cool and dry place.
- Do not keep your jacket in direct sun for prolonged periods of time.
- Avoid unnecessary compression of the jacket, especially during storage,
- Do not store your jacket in extreme heat.

Q. How do I clean my jacket if it gets dirty?

A. Your jacket can be cleaned with a mixture of a mild detergent soap and warm water. A nylon bristle brush is helpful to break up the stains if you are hand cleaning. Do not use a household top-loading style washer with an agitator as it will destroy your jacket. Hang to air dry.
